SANTIAGO HERNÁNDEZ VILLA

Guadalajara, Jalisco | (662) 496-1451 | santihdzvilla@gmail.com | LinkedIn: Santiago Hernández Villa

PROFESSIONAL SUMMARY

Industrial and Systems Engineer with experience in business intelligence, data analytics, process automation, data validation, and continuous improvement. Skilled in translating business requirements into analytical logic, developing data models and solutions to generate KPIs and control points, investigating data quality issues, and supporting production-ready reporting.

Hands-on experience with SQL and Python for data transformation, automation, root cause analysis, and cross-functional project execution across Power BI, Tableau, and Qlik Sense. Experienced in leveraging Power Automate to automate workflows, maintain alert logs, support KPI monitoring, and improve process visibility.

Practical experience integrating Generative AI tools and AI agents into day-to-day analytical workflows to support data analysis, logic development, troubleshooting, documentation, and process optimization. Comfortable using AI as a productivity and problem-solving tool while translating business needs into scalable, data-driven solutions.

EDUCATION

B.S. I Industrial and Systems engineering | Tecnológico de Monterrey.
August 2021 - June 2025

Study Abroad – Business Administration and Management | University of Nebrija, Madrid, España.
August 2024– December 2024

EXPERIENCE

Sep 2024 – Present

Business Intelligence / Data Analytics | GEODIS SCO

- Develop and maintain data transformation processes and business logic to analyze operational and financial data across logistics operations.
- Lead the implementation of Business Intelligence projects for multiple global clients, managing requirements gathering, stakeholder alignment, solution validation, and deployment from initial design through production.
- Analyze large volumes of operational data and translate business requirements into KPIs, metrics, dashboards, and analytical solutions that support data-driven decision-making.
- Design and automate control points and data validation rules to identify data inconsistencies, operational exceptions, service deviations, and potential financial losses.
- Design and optimize data models integrating multiple operational and financial data sources, implementing controls for data duplication, integrity, consistency, and overall data quality.
- Investigate data quality and reporting issues through root cause analysis, testing, and validation, and develop corrective solutions for production implementation.
- Develop workflow and reporting automations using Power Automate, including automated alert tracking and monitoring processes to support KPI visibility and operational follow-up.
- Leverage Generative AI and AI agents as part of analytical workflows to support business logic development, data analysis, troubleshooting, documentation, and process optimization.
- Drive automation and reporting improvements, including an RPA implementation that generated €13,452 in annual savings.
- Partner with Operations teams and business stakeholders to document requirements, validate results, monitor performance, and support new solution implementations.

Operational Excellence | GEODIS SCO **Apr 2023 – Sep 2024**

- Developed analytical tools and dashboards to measure internal and supplier performance through operational metrics and KPIs.
- Supported process analysis, reporting, and continuous improvement initiatives across day-to-day logistics operations.

Optimization & Forecasting Project | Coppel **Feb 2025 – Aug 2025**

- Developed an optimization and forecasting solution for sales and inventory management, identifying an estimated 51% improvement opportunity.

Lean Improvement Project | Industria Valore (Scappino) **Aug 2023 – Dec 2023**

- Led a Lean diagnostic and improvement project within the cutting department, redesigning the operational layout and reducing operator travel distance from 216 to 166 meters, a 23% improvement.
- Developed performance KPIs and a management dashboard to improve process monitoring and operational control.

Materials Process Improvement Project | Flex **Mar 2023 – Jun 2023**

- Analyzed material delivery processes within the plastics department and identified the primary root causes contributing to downtime across assembly lines.

TECHNICAL SKILLS

Data & Analytics: SQL, Python, Power BI, data transformation, data analysis, data modeling, data validation, KPI development.
Automation & AI: Power Automate, process automation, RPA, Generative AI tools, AI agents, AI-assisted analytics and workflow optimization.
Business Intelligence & Visualization: Power BI, Tableau, Qlik Sense, dashboard development, reporting, business intelligence.
Process Improvement: Lean, root cause analysis, process mapping, continuous improvement, testing and validation.
Tools: Microsoft Excel, Microsoft 365, SharePoint.

LANGUAGES

Spanish: Native | **English**: Advanced (IELTS B2) | French: Basic

HONORS AND RECOGNITION

CENEVAL Award for Outstanding EGEL Performance | 2025
Academic Excellence Recognition | Tecnológico de Monterrey
